HCL BigFix Compliance

Continuous policy enforcement and reporting

Overview

BigFix Compliance enforces continuous compliance with security policies throughout your organization for every endpoint, both on and off the corporate network. It includes out-of-the-box support for most popular security benchmarks published by CIS, DISA STIG, USGCB and PCI-DSS. An intelligent agent on every endpoint monitors, enforces and reports on the security configuration status of the endpoints in real-time regardless of OS type or location. Any compliance drifts are reported instantly and can be remediated quickly, to reduce the overall security risks.

Benefits

Enforce continuous security compliance

Manage hundreds of thousands of endpoints

Provide PCI-DSS compliance

Delivers a broad range of security functions

Features

Enforces continuous security compliance

BigFix Compliance offers accurate and real-time visibility and continuous enforcement of security configurations and patches. Security and compliance analytics identify, manage and report on policy exceptions and deviations. The software also shows trending and analysis of security configuration changes. The intelligent agent provides continuous compliance with automated audit cycles measured in minutes rather than weeks.

Provides PCI-DSS compliance

The solution provides Payment Card Industry Data Security Standard (PCI-DSS) compliance with BigFix Compliance Payment Card Industry (PCI) add-on. It helps with the enforcement and compliance reporting needed to satisfy the latest PCI-DSS requirements. BigFix Compliance automatically manages system configuration to improve endpoint security and helps protect organizations from the loss of confidential customer information, while lowering operational and security administration costs.

Manages hundreds of thousands of endpoints

BigFix Compliance supports a large variety of endpoints. These include servers, desktop PCs, as well as specialized equipment such as point-of-sale (POS) devices, ATMs and self-service kiosks. It provides endpoint management for major operating systems, third-party applications and policy-based patches, and helps discover endpoints that you might not have known were in your environment.

Delivers a broad range of security functions

You get a variety of security functions plus you can add other targeted functions without adding infrastructure or implementation costs. Patch management delivers patches to endpoints on your operating system and for application vendors. Security configuration management helps detect and enforce security configurations; and enables management of third-party endpoint security clients and agents.

Makes the most of BigFix technology

BigFix Compliance places an intelligent agent on each endpoint. This single agent performs multiple functions including continuous self-assessment and policy enforcement with minimal impact on system performance. It includes real-time and continuous reporting and analysis from the intelligent agent. The software also allows agents to be configured as a relay between other agents and the console, which lets existing servers or workstations transfer packages throughout the network.

About HCL Software

HCL Software is a division of HCL Technologies (HCL) that operates its primary software business. It develops, markets, sells, and supports over 20 product families in the areas of DevSecOps, Automation, Digital Solutions, Data Management, Marketing and Commerce, and Mainframes. HCL Software has offices and labs around the world to serve thousands of customers. Its mission is to drive ultimate customer success with their IT investments through relentless innovation of its products. For more information, please visit www.hcltechsw.com.
